"We are very satisfied with TRBOnet and the support of their staff. The system is very user friendly and easy to learn. We have never had trouble trying to reach tech support, they are always willing to help..."

Jeffrey Sherman, Safety and Security / FSO

"..With the TRBOnet application, managing communications between work groups is easier, and the ability to track personnel has significantly enhanced staff safety."

Mr. László Imre, Sales Manager, Fercom Ltd.

"TRBOnet Dispatch was chosen for its superior functionality. This includes: seamless integration with MOTOTRBO, the ability to monitor large amounts of traffic, its client-server architecture which allows it to work over fiber or via the Internet as well as its logging functionality – a critical feature which makes responses during emergency situations quick and effective."

Alexander Capaul, director at Naegele-Capaul Communications

"With the new MOTOTRBO radio system, combined with TRBOnet Enterprise dispatch and GPS solution, we expect to reduce our response time between the caller request and the ambulance arrival at the location by 5 minutes. For a patient's life, one minute makes all difference."

Domingos Guilherme Napoli, SAMU doctors' coordinator

Neocom Software

is a worldwide Motorola Application Partner developing innovative solutions which can be used to build and manage multifunctional dispatch centers based on the Motorola MOTOTRBO™ system. The TRBOnet™ Enterprise suite provides voice dispatch and AVL tracking. The suite also includes voice recording, phone interconnect, Geofence, text and telemetry The solution can integrate with scanners and printers, program option boards, as well as handle job ticketing. These are but few of the capabilities that differentiate this powerful and feature-rich solution.TRBOnet™ Watch expands the possibilities of the radio network monitoring to provide proactive management and reduces system downtime. TRBOnet supports the complete MOTOTRBO product line. Learn more by visiting **www.trbonet.com**

System Requirements

Platform
32-bit or 64-bit Intel Core i5 or better

Memory
minimum 3 GB

Hard Disk Space
Minimum 50 MB of disk space for a full installation
Additional hard disk space is required for database

Operating System
Windows 7 / Windows 8
Windows Server 2008 / 2008 R2 / 2012
(for the wireline connections only)

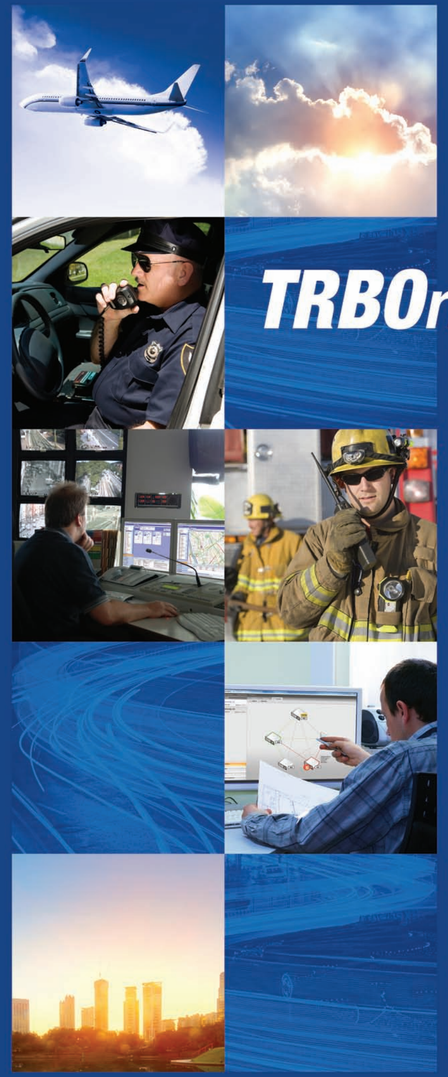

Database
MS SQL Server 2005/2008/2012
Express Edition or higher

TRBOnet. Enterprise

Dispatch Software for MOTOTRBO™

TRBOnet Best Radio Application Partner

MOTOROLA SOLUTIONS CHANNEL AWARD WINNER 2012

TRBOnet Enterprise provides a cost-effective and powerful solution for voice, text, telemetry dispatching and recording as well as location tracking and control.

The solution incorporates Geo and indoor positioning as well as text messaging, voice recording and telemetry processing. These features provide a complete overview of all station and unit activity for fast problem localization, job assignment, control and documentation. All data is recorded continuously and stored for an unlimited period. The data could then be used for further investigation as well as growth planning.

Key Benefits

- + Simplify dispatching, recording and documenting of voice, text and telemetry communications
- + Enable continuous tracking, control and protection of staff, vehicles and other resources
- + Minimize response time and Improve operational efficiency
- + Automate a wide range of daily operations
- + Provide consistent dispatching across heterogeneous (analog, digital, SIP) environments
- + Increase the efficiency of each frequency channel use
- + Deliver a single global view for multiple dispatchers across the world
- + Support role-based views for multiple dispatchers and administrators
- + Provide enterprise-level reliability and 'no-limits' scalability

Key Features

- Voice Dispatch & Cross Communications
- GPS and indoor tracking
- Job Ticketing
- Text messaging and Telemetry
- Alarming and Emergency
- Resource control

Try a demo at www.trbonet.com

Voice Dispatch & Recording

Reliable broadcast, group and private calls as well as continuous unlimited voice recording

- Detailed history of all user calls
- Voice transmission via IP networks
- Analog, VHF and UHF support; Cross patch for channels and Talk Groups
- Pre-recorded messages, repeating message transmission and voice mail
- Remote access to a radio network through the dispatcher console from any location

Phone Interconnect

Easy phone-to-radio communication

- Software-only integration, based on SIP 2.0 and higher
- Easy calls to and from radios to landline or cell phones
- Multi-line dispatch center with call forwarding and recording
- Direct phone numbers for radios with SIP Trunk

AVL Tracking

Real-time GPS tracking with a detailed history and automatic control

- Real-time GPS location, ground speed and altitude shown on a map
- Detailed history of the routes and historical playback
- Custom regions, Geofence rules for specified areas as well as speed and idle time control
- Immediate rule-triggered notifications & alarms using sound, pop-up windows, Email and SMS
- "Work alone" mode with the flexible configuration
- Web client for tracking from any browser

Indoor Positioning

Positioning and control of digital MOTOTRBO subscribers where GPS satellite navigation system is not available

- Real-time Indoor tracking
- Custom 2D and 3D maps with zoom capability
- 2-3 year battery for Indoor transmitters, range of up to 25 meters (82 feet)
- Unattended indoor beacon implementation of the IP65 standard

Text Messaging

Predefined and scheduled text messages

- Broadcast, group and private text messaging
- Multiple message templates can be created by a flexible template builder
- Informational automatic messages about regions or speed limit violations
- The ability to set up time and intervals for pre-scheduled messages

Job Ticketing

An easy way to control tasks and business processes

- Automated workflow and task assignment
- Reduced voice traffic, system usage and request response time
- Increased visibility of completed and pending tasks
- Detailed dashboards for daily operations

Telemetry

Remote control of environment and vehicle sensors

- Telemetry inputs to inform or alarm on specific sensor status
- Telemetry outputs to change the relay status, manage alarm systems, lights handles
- Multiple telemetry profiles for different devices
- Talisman Sprite telemetry device support
- Complete recording and analytics

GPS Tracker

Improved location tracking and alarms

- Detailed history of a vehicle's route with updates as quick as every 2 seconds
- GPS history for routes outside the available RF coverage
- Dramatically decreases radio channel utilization by sending groups of data as one package
- Events and telemetry data are now associated with GPS location

Man down / No movement / Crash Detect

Improve the safety of personnel working alone in isolated environments.

- Feature is activated when user starts work and continuously controls radio sensors
- All parameters are flexible and configurable to minimize false positives
- The dispatcher receives a pop-up window alarm with GPS location. Email and SMS notifications can also be configured.

Call Box

Provides a constant and reliable connection between a help center (Dispatcher) and high-risk locations where no electrical power and optic fiber trunks are available.

- Assistance box with the radio inside, which has direct access to the dispatch center
- Can reduce the number of radios needed in specific areas
- Un-interrupted performance provided by solar batteries and a powerful antenna
- Customizable body implementation available
